

Digital Strategy

Committee Report

October 2026

The digital strategy committee along with the Public Relations committee has been working on defining what social media is and it's long term effects on this fellowship. During the process of defining what social media should be it was discovered that Gamblers Anonymous has already defined social media and the committees have agreed that since the program is based on honesty, we believe InterGroups will abide by that definition and no further action is needed. Other issues regarding social media exist and need further discussion with the Board of Trustees.

The digital strategy committee realized that several items on the website define situations that are not listed on the guidance code, rules and procedures or by laws, yet are quoted as something that the fellowship or Trustees have to follow simply because they are published on the website, or a piece of Literature. An agenda item exists to correct this issue.

The Trustee WhatsApp Group currently has over 115 member. The conversations have been strong and most recently focused on issues that our fellowship are facing.
